Sta-Natural Sealer

'Kemiko creates an easy and flawless finish, Sta-Natural'

Kemiko unveils new *Sta-Natural Sealer*, an outstanding and durable replacement for solvent-based sealers for concrete and other cement or mortar surfaces. This product is an easy to use, eco-friendly emulsion that creates the perfect finish, with no solvents, little to no odor, and maximum protection against UV, alkaline, and many other types of damage.

Sta-Natural is ideal for many applications: stained, stamped, or bare concrete; and new or existing stucco and brick. It is the perfect solution for driveways, walkways, facades, pool decks, and cast or poured concrete, horizontal or vertical surfaces. This remarkable product repels water, allows the substrate to breath, and resists discolorations, frost and other typical damage.

Easy to handle and apply, fast drying and curing, no-VOC (volatile organic compound), *Sta-Natural* also offers simple cleanup with soap and water. It dries to a lustrous natural sheen, adding beauty to an exceptionally strong finish.
